

# Snaplock

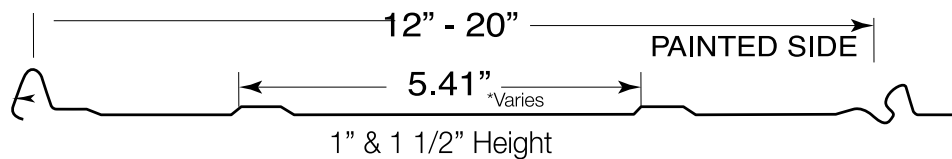

Snap Lock, installation-wise, is Versaframe's smartest and most neatly designed panel. With the same sharp look of JSM Standing Seam, Snap Lock is the other panel of choice for those who want a commercial or residential roof to stand out and impress.

Engineered to be installed without the specialized tight-seaming clips that the JSM panel requires, Snap Lock is a profile that snaps down on one side and is screwed down through its fabricated pleated edge on the other. Snap Lock must be installed over a solid substrate, such as plywood.

The Snap Lock panel finishes any structure with a clean, hidden fastener steel design that has the power to elevate the status and value of whatever structure it finishes.

- **Raised seam prevents water penetration**
- **Hidden fastener system**
- **Striking appearance**
- **Easy to install**
- **Low maintenance**
- **Great for new construction & re-roofing projects**
- **Striated available**

## Specification Data

- 12" - 20" panel coverage
- 1" & 1.5" rib heights
- Concealed fastener architectural metal roof panel
- Custom lengths from 3' - 45'
- Gauges: 26ga and 24ga steel
- Coloured and Galvalume finish
- Applies over solid substrate
- Purpose: roofing panel
