

Standing Seam

The Versaframe JSM standing seam panel is the Cadillac of steel roofing panels. This profile is manufactured as a hidden fastener system, and is available in 22-26 gauge steel thickness, and in a coloured or agalume finish.

This uniquely designed clip-fastening system allows for each panel to cover up the fastening of the panel laid previous, providing a fantastic, aesthetic-looking roof that wows even the most critical judge of residential and commercial design.

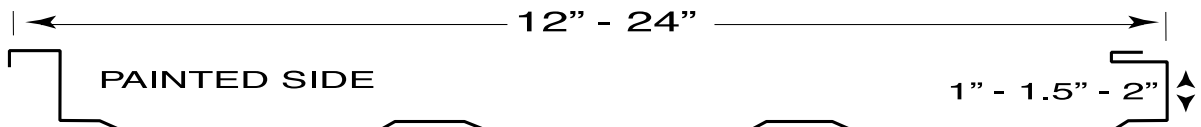

Our standing seam panel is available in a curved profile to add to the look of your roof. Curved standing seam panels are available in 22ga and 24ga with a 1 1/2" rib height.
